Next Gen

A Challenge for K-12 Students!

Move Mining Next Gen is a competition that asks **you** to answer the question:

Why is mining important to our lives?

With teamwork, research, writing, planning and production, you can use your voice to help a world audience learn **how important** minerals are to their daily lives. What's more, you'll show them how **you** can use science, technology, literacy and performance skills to share that important message.

How does it work?

Get a team together or decide to work solo. Research mined minerals that are important to your life. Consider how you'd like to communicate what you've found. Finally, create and submit a three-minute video to share your ideas with the world!

Grand Prize – \$1,000

Best in K-5 – \$250

Awarded to the video created by an individual or a team in grades kindergarten through 5th that inspires action, stimulates thought and creates excitement about mining. This video motivates viewers to explore how mining impacts their everyday lives and encourages them to spread the word.

Best in 6-8 – \$250

Awarded to the video created by an individual or a team in grades 6th through 8th that brings the most fun and style to telling the world about mining. This video will be unique while still accurately sending the right message about why mining is important and how it impacts our lives.

Best in 9-12 – \$250

Awarded to the video created by an individual or team in grades 9th through 12th that really brings creativity and a fresh take on presenting the importance of mining. This video will convey the importance of mining to the world through creative expression and unique styling.

One video will also win the **People's Choice** award (**\$500**)
